In the RCSC press release titled, “RCSC goes solar — what does that mean?” the RCSC admits that the board has already unanimously agreed to use PIF funds to purchase solar panels at \$4.4 million after 66 months of the lease. That’s “liability, direct or contingent, over \$750,000” which requires a membership vote, no matter what the “savings” double-talk is.

When someone tells me we have to pay for repairs and maintenance that “will be minimal,” I get worried. When the board approves \$10.5 million worth of additional liability insurance just for the solar panels, I get worried, especially when they are

telling us they are worth \$4.4 million in 66 months.

We continue going door-to-door to gather funds to enforce Article X of the RCSC Articles of Incorporation in Superior Court. The members must get control of RCSC spending. This multi-million dollar solar-panel experiment is symptomatic of the dangerous shift in the balance of power that must be corrected for the sake of pensioner security. Lawsuit is the only remedy. Visit <http://www.annereport.com/lawsuit.html> for details.
